You need to create a device inventory report that includes the data stored in the data warehouse. What should you use to create the report?

A. the Azure portal app

B. Endpoint analytics
C. the Company Portal app
D. Microsoft Power BI

Answer: D

Explanation:
You can use the Power BI Compliance app to load interactive, dynamically generated reports for your Intune tenant. Additionally, you can load your tenant data in Power BI using the OData link. Intune provides connection settings to your tenant so that you can view the following sample reports and charts related to:
Devices
Enrollment
App protection policy Compliance policy
Device configuration profiles Software updates
Device inventory logs
Note: Load the data in Power BI using the OData link
With a client authenticated to Azure AD, the OData URL connects to the RESTful endpoint in the Data Warehouse API that exposes the data model to your reporting client. Follow these instructions to use Power BI Desktop to connect and create your own reports.
- Sign in to the Microsoft Endpoint Manager admin center.
- Select Reports > Intune Data warehouse > Data warehouse.
- Retrieve the custom feed URL from the reporting blade, for example:
- Open Power BI Desktop.
- Choose File > Get Data. Select OData feed.
- Choose Basic.
- Type or paste the OData URL into the URL box.
- Select OK.
- If you have not authenticated to Azure AD for your tenant from the Power BI desktop client, type your credentials. To gain access to your data, you must authorize with Azure Active Directory (Azure AD) using OAuth 2.0.
- Select Organizational account.
- Type your username and password.
- Select Sign In.
- Select Connect.
- Select Load.
