### NEW QUESTION 1

- (Exam Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a Microsoft Exchange Online tenant that contains 1,000 users.

A user named User1 receives a non-delivery report (NDR) when attempting to send an email message to an internal group named sales@contoso.com. The NDR contains the following text: "5.7.1 Delivery not authorized."

You need to ensure that User1 can send email to sales@contoso.com successfully.

Solution: You modify the properties of a mail flow rule

- A. Yes
- B. No

**Answer: B**

#### Explanation:

Reference:

<https://docs.microsoft.com/en-us/exchange/mail-flow-best-practices/non-delivery-reports-in-exchange-online/fix>

### NEW QUESTION 2

- (Exam Topic 5)

You have a Microsoft Exchange Online tenant that uses a third-party email hygiene system named Service1. Service1 blocks all encrypted email.

All external email is routed through Service1 by using a connector.

Users classify email by using sensitivity labels. Emails classified as Secret are encrypted automatically. You need to ensure that the users can send emails classified as Secret to external recipients.

Which two items should you create? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. a remote domain
- B. a connector
- C. a data loss prevention (DLP) policy
- D. a mail flow rule
- E. a label policy

**Answer: BD**

#### Explanation:

Use an additional Connector and a Mail Flow Rule to bypass the third-party email hygiene system for emails that have the Secret sensitivity label.

Emails with the sensitivity label will use the new connector. All other emails will use the existing connector. Reference:

<https://docs.microsoft.com/en-us/exchange/mail-flow-best-practices/use-connectors-to-configure-mail-flow/con>

### NEW QUESTION 3

- (Exam Topic 5)

You have a Microsoft Exchange Online tenant that contains a user named User1. User1 has a mobile device. You need to enable Exchange ActiveSync logging for User1 and retrieve the log files.

Which two Exchange Online PowerShell cmdlets should you use? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Get-ActiveSyncDevice
- B. Set-ActiveSyncMailboxPolicy
- C. Set-ClientAccessRule
- D. Get-MobileDeviceStatistics
- E. Set-CASMailbox

**Answer: E**

### NEW QUESTION 4

- (Exam Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a Microsoft Exchange Online tenant that uses an email domain named contoso.com. You need to prevent all users from performing the following tasks:

- > Sending out-of-office replies to an email domain named fabrikam.com.
- > Sending automatic replies to an email domain named adatum.com.

The solution must ensure that all the users can send out-of-office replies and automatic replies to other email domains on the internet.

Solution: You create one mail flow rule. Does this meet the goal?

- A. Yes
- B. No

**Answer: B**

**Explanation:**

**NEW QUESTION 80**

- (Exam Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. You have a Microsoft 365 E5 subscription. You need to ensure that a user named User1 can review audit reports from the Microsoft 365 security center. User1 must be prevented from tracing messages from the Security admin center. Solution: You assign the Security Reader role to User1. Does this meet the goal?

- A. Yes
- B. No

**Answer: A**

**Explanation:**

Security Administrator can view the audit reports but cannot create a message trace. Reference:

**NEW QUESTION 82**

- (Exam Topic 5)

Your company named ADatum Corporation has a Microsoft 365 subscription. ADatum acquires a company named Contoso, Ltd. In the subscription, you create a new mailbox for each user at Contoso. You need to provide the Contoso users with a global address list (GAL) that contains only their email addresses. Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer Area

**NEW QUESTION 102**

- (Exam Topic 5)

You have a hybrid deployment between a Microsoft Exchange Online tenant and an on-premises Exchange Server 2019 organization. Several users hosted in Microsoft 365 report that when they send email messages to mailboxes hosted in Exchange Server 2019, the messages fail to be delivered.

You need to examine the non-delivery reports (NDRs) sent to the Microsoft 365 mailboxes.

Which two actions should you perform? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. From an on-premises Exchange server, use the transport logs.
- B. From an on-premises Exchange server, use the SMTP logs.
- C. From the on-premises Exchange admin center, use a message trace.
- D. From the Exchange admin center, use a message trace.
- E. From the Exchange Management Shell, run the Get-Queue cmdlet.

**NEW QUESTION 105**

- (Exam Topic 5)

You have a Microsoft Exchange Server 2019 hybrid deployment. All Mailbox servers and domain controllers are in the same site. You deploy an Edge Transport server.

You need to ensure that all SMTP traffic between the on-premises organization and Exchange Online is routed through the Edge Transport server.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

**Actions**

**Answer Area**

- On a Mailbox server, modify the accepted domains.
- Copy the Edge Subscription file to a Mailbox server.
- On the Edge Transport server, run New-EdgeSubscription.
- On a Mailbox server, run New-EdgeSubscription.
- Run the Microsoft Office 365 Hybrid Configuration wizard.

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

New-EdgeSubscription -FileName "c:\EdgeServerSubscription.xml" This example creates the Edge Subscription file. It should be run on your Edge Transport server. New-EdgeSubscription -FileData ([byte[]](Get-Content -Path "C:\EdgeServerSubscription.xml" -Encoding Byte -ReadCount 0)) -Site "Default-First-Site-Name" This example also imports the Edge Subscription file generated in Example 1 to the Active Directory site Default-First-Site-Name; however, the end result is accomplished using one command. You must run this command on the Mailbox server. ref. <https://docs.microsoft.com/en-us/powershell/module/exchange/mail-flow/new-edgesubscription?view=exchange>

**NEW QUESTION 109**

- (Exam Topic 5)

You plan to migrate to Microsoft Exchange Online. The solution must meet the following requirements.

- Messages sent by the research & development department at your company must be routed to the internet through an on-premises data loss prevention (DLP) appliance.
- The actual source of the messages received by Exchange Online from a third-party cloud filtering service must be identified.

What features should you use to meet the requirements? To answer, drag the appropriate options to the correct requirements. Each option may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

**Exchange Features**

**SIMULATION**

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

**Answer:** A

**Explanation:**

Go to the Microsoft 365 Defender portal and undEemr ail & collaboration policy.

> An alert policy consists of the following settings and conditions.

select policies & rules

>Alert

- Activity the alert is tracking. You create a policy to track an activity or in some cases a few related activities, such as sharing a file with an external user by sharing it, assigning access permissions, or creating an anonymous link. When a user performs the activity defined by the policy, an alert is triggered based on the alert threshold settings.

- Activity conditions. For most activities, you can define additional conditions that must be met to trigger an alert. Common conditions include IP addresses (so that an alert is triggered when the user performs the activity on a computer with a specific IP address or within an IP address range), whether an alert is triggered if a specific user or users perform that activity, and whether the activity is performed on a specific file name or URL. You can also configure a condition that triggers an alert when the activity is performed by any user in your organization. The available conditions are dependent on the selected activity.

> You can also define user tags as a condition of an alert policy. This results in the alerts triggered by the policy to include the context of the impacted user. You can use system user tags or custom user tags.

- When the alert is triggered. You can configure a setting that defines how often an activity can occur before an alert is triggered. This allows you to set up a policy to generate an alert every time an activity matches the policy conditions, when a certain threshold is exceeded, or when the occurrence of the activity the alert is tracking becomes unusual for your organization.

> If you select the setting based on unusual activity, Microsoft establishes a baseline value that defines the normal frequency for the selected activity. It takes up to seven days to establish this baseline, during which alerts won't be generated. After the baseline is established, an alert is triggered when the frequency of the activity tracked by the alert policy greatly exceeds the baseline value. For

auditing-related activities (such as file and folder activities), you can establish a baseline based on a single user or based on all users in your organization; for malware-related activities, you can establish a baseline based on a single malware family, a single recipient, or all messages in your organization.

- Alert category. To help with tracking and managing the alerts generated by a policy, you can assign one of the following categories to a policy.

- Data loss prevention
- Information governance
- Mail flow
- Permissions
- Threat management
- Others

➤ When an activity occurs that matches the conditions of the alert policy, the alert that's generated is tagged with the category defined in this setting. This allows you to track and manage alerts that have the same category setting on the Alerts page in the compliance center because you can sort and filter alerts based on category.

- Alert severity. Similar to the alert category, you assign a severity attribute (Low, Medium, High, or Informational) to alert policies. Like the alert category, when an activity occurs that matches the conditions of the alert policy, the alert that's generated is tagged with the same severity level that's set for the alert policy. Again, this allows you to track and manage alerts that have the same severity setting on the Alerts page. For example, you can filter the list of alerts so that only alerts with a High severity are displayed.
- Email notifications. You can set up the policy so that email notifications are sent (or not sent) to a list of users when an alert is triggered. You can also set a daily notification limit so that once the maximum number of notifications has been reached, no more notifications are sent for the alert during that day. In addition to email notifications, you or other administrators can view the alerts that are triggered by a policy on the Alerts page. Consider enabling email notifications for alert policies of a specific category or that have a higher severity setting.

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a Microsoft Exchange Online tenant that uses an email domain named contoso.com. You need to prevent all users from performing the following tasks:

- > Sending out-of-office replies to an email domain named fabrikam.com.
- > Sending automatic replies to an email domain named adatum.com.

The solution must ensure that all the users can send out-of-office replies and automatic replies to other email domains on the internet.

Solution: You create two new remote domains. Does this meet the goal?

- A. Yes
- B. No

You have 1,000 user accounts that are each licensed for Microsoft 365. Each user account has a Microsoft Exchange Online mailbox. Ten of the user accounts are configured as service accounts for applications. The applications send event notifications to the mailboxes of the service accounts by using SMTP. The developers of each application have delegated access to the mailbox of their respective application. You need to ensure that all the event notifications sent by the applications are retained in the service account mailboxes so that new developers can review older notifications. The developers must be able to view only the notifications for their respective application. What should you do?

- A. Replace the service account mailboxes with a single user mailbox that contains a folder for each application.
- B. Replace the service account mailboxes with a single user mailbox that contains Power Automate rules.
- C. Convert the service account mailboxes into shared mailboxes.
- D. Convert the service account mailboxes into mail-enabled users.

**NEW QUESTION 220**

- (Exam Topic 5)

You have a Microsoft Exchange Online tenant.

You discover that a virus has infected the mailboxes of several users. The users are currently spreading the virus by emailing attachments that contain the virus.

You need to temporarily prevent all users from emailing attachments while you remove the virus from all the mailboxes.

What should you configure?

- A. a connection filter
- B. a mail flow rule
- C. a connector
- D. a spam fitter

**NEW QUESTION 221**

- (Exam Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company has an Exchange Online tenant that contains 2,000 mailboxes.

A partner company named Fabrikam, Inc. uses a third-party messaging solution. The outbound SMTP server for Fabrikam uses an IP address of 131.107.2.22.

You discover that several email messages from the fabrikam.com domain are erroneously marked as spam. You need to ensure that all the email messages sent from the fabrikam.com domain are delivered successfully to the user mailboxes of your company.

Solution: You create a connection filter. Does this meet the goal?

- A. Yes

B. No

**Answer:** B

**Explanation:**

You can allow the server IP address in the Connection Filter. This would achieve the objective of ensuring all email from Fabrikam.com is delivered. However, it would also allow any other company that uses the thirdparty email server to bypass the spam filter.

The fact that the question specifies that Fabrikam uses a “third-party messaging solution” suggests that the answer to this question should be No although technically it would work.

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

You need to prevent email messages that contain attachments that have the .js file extension from being delivered to any recipients in your organization.

To complete this task, sign in to the Microsoft 365 admin center.

- A. Mastered
- B. Not Mastered

**Answer: A**

**Explanation:**

➤ Go to **Mail flow > Rules**.

➤ Create the rule by using one of the following options:

- To create a rule from a template, click **Add** and select a template. +

- To copy a rule, select the rule, and then select **Copy** .

- To create a new rule from scratch, **Add** and then select **Create a new rule**. +

➤ In the **New rule** dialog box, name the rule, and then select the conditions and actions for this rule:

- In **Apply this rule if...**, select the condition you want from the list of available conditions:

Some conditions require you to specify values. For example, if you select The sender is... condition, you must specify a sender address. If you're adding a word or phrase, note that trailing spaces are not allowed.

- \_ If the condition you want isn't listed, or if you need to add exceptions, select More options. Additional conditions and exceptions will be listed.
  - If you don't want to specify a condition, and want this rule to apply to every message in your organization, select [Apply to all messages] condition.
  - In Do the following..., select the action you want the rule to take on messages matching the criteria from the list of available actions: Some of the actions will require you to specify values. For example, if you select the Forward the message for approval to... condition, you will need to select a recipient in your organization.
  - \_ If the condition you want isn't listed, select More options. Additional conditions will be listed.
  - Specify how rule match data for this rule is displayed in the Data Loss Prevention (DLP) reports and the protection reports.
  - Set the mode for the rule. You can use one of the two test modes to test the rule without impacting mail flow. In both test modes, when the conditions are met, an entry is added to the message trace:
    - \_ Enforce: This turns on the rule and it starts processing messages immediately. All actions on the rule will be performed.
    - \_ Test with Policy Tips: This turns on the rule, and any Policy Tip actions ( Notify the sender with a Policy Tip) will be sent, but no actions related to message delivery will be performed. Data Loss Prevention (DLP) is required in order to use this mode.
    - \_ Test without Policy Tips: Only the Generate incident report action will be enforced. No actions related to message delivery are performed.
- Exchange Online admins can create mail flow rules in the Exchange admin center (EAC) at Mail flow >Rules. You need permissions to do this procedure.
