DP-300 Dumps

Administering Relational Databases on Microsoft Azure (beta)

https://www.certleader.com/DP-300-dumps.html

NEW QUESTION 1
HOTSPOT
You have an on-premises Microsoft SQL Server 2016 server named Server1 that contains a database named DB1.
You need to perform an online migration of DB1 to an Azure SQL Database managed instance by using Azure Database Migration Service. How should you configure the backup of DB1? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.
Hot Area:

Answer Area

Backup type:
- Full and log backups only
- Full backup only
- Log backup only

Backup option:
- WITH CHECKSUM
- WITH NOINIT
- WITH UNLOAD

A. Mastered
B. Not Mastered

Answer: A

Explanation:

Answer Area

Backup type:
- **Full and log backups only**
- Full backup only
- Log backup only

Backup option:
- **WITH CHECKSUM**
- WITH NOINIT
- WITH UNLOAD

NEW QUESTION 2
You have an Azure SQL database named sqldb1.
You need to minimize the possibility of Query Store transitioning to a read-only state. What should you do?

A. Double the value of Data Flush interval
B. Decrease by half the value of Data Flush Interval
C. Double the value of Statistics Collection Interval
D. Decrease by half the value of Statistics Collection interval

Answer: B

NEW QUESTION 3
▪You need to recommend an availability strategy for an Azure SQL database. The strategy must meet the following requirements: Support failovers that do not require client applications to change their connection strings.
▪Replicate the database to a secondary Azure region. Support failover to the secondary region.
What should you include in the recommendation?

A. failover groups
B. transactional replication
C. Availability Zones
D. geo-replication

Answer: D

NEW QUESTION 4
You are building a database backup solution for a SQL Server database hosted on an Azure virtual machine.
In the event of an Azure regional outage, you need to be able to restore the database backups. The solution must minimize costs. Which type of storage accounts should you use for the backups?

A. locally-redundant storage (LRS)
B. read-access geo-redundant storage (RA-GRS)
C. zone-redundant storage (ZRS)
D. geo-redundant storage

Answer: B

NEW QUESTION 5

You are planning disaster recovery for the failover group of an Azure SQL Database managed instance.

Your company's SLA requires that the database in the failover group become available as quickly as possible if a major outage occurs. You set the Read/Write failover policy to Automatic.

What are two results of the configuration? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

A. In the event of a datacenter or Azure regional outage, the databases will fail over automatically.
B. In the event of an outage, the databases in the primary instance will fail over immediately.
C. In the event of an outage, you can selectively fail over individual databases.
D. In the event of an outage, you can set a different grace period to fail over each database.
E. In the event of an outage, the minimum delay for the databases to fail over in the primary instance will be one hour.

Answer: AE

NEW QUESTION 10
