

Microsoft

Exam Questions AB-730

AI Business Professional

NEW QUESTION 1

Select the answer that correctly completes the sentence.

Answer Area

From Microsoft 365, you the Researcher agent.

- cannot modify the settings of
- can modify the agent instructions of
- can add an additional suggested prompt to
- can delete one of the suggested prompts from

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

From Microsoft 365, you the Researcher agent.

The correct completion is ??cannot modify the settings of?? because built-in agents such as the Researcher agent in Microsoft 365 Copilot are system-defined experiences. These agents are designed and managed by Microsoft to ensure consistent functionality, security, compliance, and alignment with responsible AI standards.

While users can interact with Researcher, provide prompts, and refine outputs during conversations, they cannot directly modify the core system settings or configuration of the built-in agent from Microsoft 365. Administrative configuration and deeper customization are available when creating custom Copilot agents through approved development tools, but default Microsoft-provided agents have controlled configurations.

Options such as modifying agent instructions, adding prompts, or deleting suggested prompts imply direct structural customization of the built-in agent interface, which is not supported in the standard Microsoft 365 Copilot experience.

This reflects a key generative AI governance principle in enterprise environments: system-level controls remain centrally managed to maintain data protection, compliance, and responsible AI implementation across the organization.

NEW QUESTION 2

You have a Microsoft 365 Copilot license.

You plan to run several prompts.

What should you use to ensure that Copilot generates the best response for each prompt? More than one answer choice may achieve the goal. To answer, select the Best options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Prompt 1: From /Feedback_Q1-Q3.xlsx, consolidate all the sheets, categorize the feedback by theme, compute the positive/negative sentiment by product line, and visualize the top five drivers.

The Analyst agent
Chat
The Researcher agent

Prompt 2: Using our SharePoint folder '/Go-To-Market/2025' and reputable web sources, produce a 1-page brief about AI trends that includes five key insights, citations, and callouts on gaps/risks.

The Analyst agent
Chat
The Research agent

Prompt 3: For a VP, prepare a polished executive email that distills the strategic priorities, critical decisions, and immediate next steps from the attached Strategic_Plan_2025.docx, ensuring that the tone aligns with senior leadership's communication standards.

The Analyst agent
Chat
The Researcher agent

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

Prompt 1: From /Feedback_Q1-Q3.xlsx, consolidate all the sheets, categorize the feedback by theme, compute the positive/negative sentiment by product line, and visualize the top five drivers.

The Analyst agent
Chat
The Researcher agent

Prompt 2: Using our SharePoint folder '/Go-To-Market/2025' and reputable web sources, produce a 1-page brief about AI trends that includes five key insights, citations, and callouts on gaps/risks.

The Analyst agent
Chat
The Research agent

Prompt 3: For a VP, prepare a polished executive email that distills the strategic priorities, critical decisions, and immediate next steps from the attached Strategic_Plan_2025.docx, ensuring that the tone aligns with senior leadership's communication standards.

The Analyst agent
Chat
The Researcher agent

NEW QUESTION 3

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area

Statements

Microsoft 365 Copilot uses contextual information from your organization to suggest prompts.

Yes

No

Microsoft 365 Copilot can use contextual information from your organization to train the large language model. (LLM).

Microsoft 365 Copilot uses contextual information from your organization to augment a prompt, before sending the prompt to the large language model (LLM).

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Microsoft 365 Copilot is designed to be helpful by using work context—for example, the files you have access to, recent activity, meetings, emails, and SharePoint/OneDrive content—to suggest relevant prompts and help you start tasks faster. It also uses this context to augment your prompt before it is sent to the LLM. This is the grounding approach (often described as retrieval-augmented generation): Copilot retrieves relevant organizational content you're permitted to access and adds it as supporting context so responses are accurate and business-relevant. However, Microsoft 365 Copilot does not use your organization's contextual data to train the underlying foundation model. That separation is critical for enterprise privacy and compliance: your prompts, responses, and tenant data are used to generate the answer for your session and permissions, but are not used to improve or retrain the base LLM. This approach supports responsible AI, protects confidential business information, and ensures outputs respect access controls.

NEW QUESTION 4

You need to access Microsoft 365 Copilot from a web browser. Which URL should you use?

- A. <https://m365.cloud.microsoft>
- B. <https://copilotstudio.microsoft.com>
- C. <https://myapps.microsoft.com>
- D. <https://myaccountmicrosoft.com>

Answer: A

Explanation:

Microsoft 365 Copilot can be accessed via its dedicated web experience for enterprise users. The correct web entry point for Microsoft 365 Copilot is <https://m365.cloud.microsoft>, which provides authenticated access to Copilot features within the Microsoft 365 environment. This URL routes users into the Microsoft 365 ecosystem where Copilot integrates with organizational data such as SharePoint, OneDrive, Teams, and Outlook. It ensures that users are authenticated through Microsoft Entra ID and that access controls are enforced according to tenant policies. Option B refers to Copilot Studio, which is used to build and manage custom copilots and agents rather than access the Microsoft 365 Copilot chat experience. Option C (My Apps) is a general application launcher portal. Option D is an incorrect account management URL and does not provide Copilot access. Therefore, to access Microsoft 365 Copilot from a web browser, the correct URL is <https://m365.cloud.microsoft>.

NEW QUESTION 5

You are creating a prompt in Microsoft 365 Copilot to get information about a proposal. You need to ensure that the response is grounded in the proposal's information.

What is the best approach to achieve the goal? More than one answer choice may achieve the goal. Select the BEST answer.

- A. Instruct Copilot to rely on its training data to infer proposal details.
- B. Add a specific goal that you want Copilot to accomplish.
- C. Reference the proposal content in the prompt.
- D. Add context about the intended audience.

Answer: C

Explanation:

According to Microsoft AI Business Professional guidance for Microsoft 365 Copilot, grounding a response means ensuring the AI generates output based on specific, authoritative content rather than relying on generalized training data. When working with enterprise documents such as proposals, grounding is achieved by explicitly referencing the source material within the prompt.

Option C is correct because referencing the proposal content directs Copilot to use that specific document as the primary context for generating the response. Microsoft documentation emphasizes that effective prompts should include clear context and explicit references to relevant files, meetings, emails, or documents stored in Microsoft 365. This reduces hallucinations and ensures factual alignment with organizational data.

Option A is incorrect because relying on training data increases the risk of inaccurate or fabricated information. Options B and D improve prompt clarity but do not guarantee grounding in the proposal itself.

Therefore, explicitly referencing the proposal content is the most reliable and best practice method for ensuring grounded, accurate responses in Microsoft 365 Copilot.

NEW QUESTION 6

You use the Researcher agent in Microsoft 365 Copilot to generate a report.

What can you use to verify whether the report was generated by using valid sources?

- A. citations
- B. instructions
- C. memory
- D. capabilities

Answer: A

Explanation:

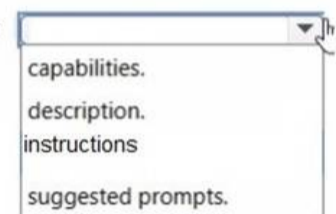

The Researcher agent in Microsoft 365 Copilot is designed to gather and synthesize information from web and organizational sources. To support transparency and trust, Copilot provides citations alongside generated content when external or referenced material is used. Citations allow users to review the original sources that informed the generated report. This aligns with Microsoft's Responsible AI commitment to transparency and verifiability. By selecting or reviewing citations, users can confirm that the information originates from credible and relevant references rather than unsupported model-generated text. Instructions define how the agent behaves but do not validate source authenticity. Memory refers to conversational context retention and does not confirm source validity. Capabilities describe what the agent can do, not whether its output is grounded in legitimate sources. Therefore, to verify that a report generated by the Researcher agent uses valid sources, you should review the citations.

NEW QUESTION 7

Select the answer that correctly completes the sentence.

Answer Area

You are creating an agent in the Microsoft 365 Copilot app. The agent persona must be warm and friendly. To set the persona, you should modify the

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

The correct answer is instructions because an agent's persona—such as being warm, friendly, formal, or analytical—is defined through its behavioral and communication guidance. In Microsoft 365 Copilot, the Instructions field controls how the agent responds, including tone, style, personality, response structure, and interaction patterns. The description typically explains what the agent does, not how it communicates. Capabilities define what tasks the agent can perform, such as summarizing documents or analyzing data. Suggested prompts provide example user queries but do not control the agent's personality or communication style. To establish a warm and friendly persona, the instructions should explicitly state guidance such as: "Respond in a supportive, conversational tone. Use clear and positive language. Be encouraging and approachable." This ensures consistent tone across all interactions. Defining persona through instructions reflects prompt engineering best practices in generative AI, enabling predictable behavior, improved user experience, and alignment with organizational communication standards within Microsoft 365 Copilot environments.

NEW QUESTION 8

You are creating a custom agent in the Microsoft 365 Copilot app for the marketing team at your company. The agent will be used to produce marketing collateral, including copy, logos, and artwork.

What should you add to the agent? More than one answer choice may achieve the goal. Select the BEST answer.

- A. a template
- B. a suggested prompt
- C. image generator
- D. code interpreter

Answer: C

Explanation:

When building a custom agent in Microsoft 365 Copilot for marketing use cases, the required capabilities must align with the intended outputs. Marketing collateral includes written copy as well as visual assets such as logos and artwork. According to Microsoft AI Business Professional documentation, generative AI solutions that produce visual creative assets require integrated image generation capabilities powered by multimodal AI models. Option C is correct because an image generator enables the agent to create visual marketing materials such as logos, artwork, and design elements. While templates and suggested prompts can improve usability and consistency, they do not provide the underlying capability to generate images. A code interpreter is designed for data analysis, calculations, or technical scripting tasks and is not relevant to creative marketing asset production. Therefore, to fulfill the requirement of producing both textual and visual marketing collateral, the most essential addition to the custom agent is an image generator.

NEW QUESTION 9

Select the answer that correctly completes the sentence.

Answer Area

Overreliance is a common risk associated with generative AI, where

users exploit vulnerabilities to elicit unauthorized behavior.

the model is tricked into exposing confidential information.

the model generates misleading, inaccurate, or irrelevant content.

users accept the AI-generated output without verifying its accuracy

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

Overreliance is a common risk associated with generative AI, where

users exploit vulnerabilities to elicit unauthorized behavior.

the model is tricked into exposing confidential information.

the model generates misleading, inaccurate, or irrelevant content.

users accept the AI-generated output without verifying its accuracy

NEW QUESTION 10

For each of the following statements, select Yes if the statement is true. Otherwise, select No.
 NOTE: Each correct selection is worth one point.

Answer Area

Statements

	Yes	No
You can add a Microsoft Teams chat as a knowledge source to a Microsoft 365 Copilot agent.	<input type="radio"/>	<input type="radio"/>
You can add a Microsoft 365 Copilot conversation as a knowledge source to a Copilot agent.	<input type="radio"/>	<input type="radio"/>
You can use an image file, such as a JPG file, as a knowledge source for a Microsoft 365 Copilot agent.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Statements:

You can add a Microsoft Teams chat as a knowledge source to a Microsoft 365 Copilot agent. Answer: Yes

You can add a Microsoft 365 Copilot conversation as a knowledge source to a Copilot agent. Answer: No

You can use an image file, such as a JPG file, as a knowledge source for a Microsoft 365 Copilot agent. Answer: NO

Microsoft 365 Copilot Agent Builder supports grounding agents in approved knowledge sources so responses are accurate and permission-trimmed. Teams chats can be used as a knowledge source: Microsoft Learn confirms you can ground an agent in Teams data, including chat messages (and optionally scope to specific chats), enabling the agent to reference collaboration context when answering questions.

ACopilot conversation itself is not a supported "knowledge source" option; knowledge sources are configured from items like SharePoint content, Teams, email, websites, uploaded files, and connectors—not prior chat transcripts.

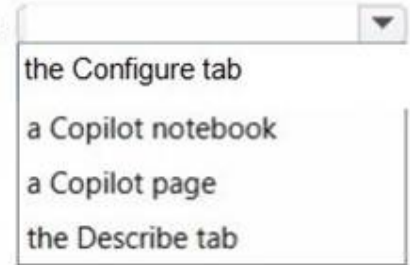

Finally, JPG images are not supported as knowledge-source file types. Microsoft's supported file types for agent knowledge include documents like .doc/.docx, .pdf, .ppt/.pptx, .txt, and Excel formats (.xls/.xlsx), but not image formats. Therefore, you cannot use a JPG as a knowledge source for a Copilot agent.

NEW QUESTION 10

Select the answer that correctly completes the sentence.

Answer Area

When you are creating an agent in Microsoft 365 Copilot, you can leverage generative AI to build the agent by using

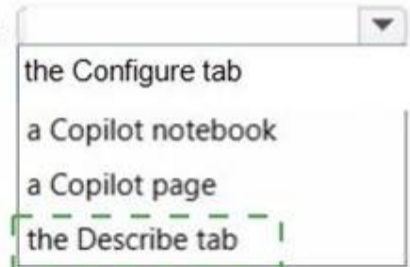

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

When you are creating an agent in Microsoft 365 Copilot, you can leverage generative AI to build the agent by using

NEW QUESTION 13

You use Microsoft 365 Copilot.
 You regularly upload the same five files to Copilot chats.
 You need to simplify referencing the files in the chats.
 What are two ways to achieve the goal?

- A. Send a prompt that includes the files, and then save the prompt.
- B. Create a notebook that references the files.
- C. Ask the data engineers to create a fine-tuned model.
- D. Create an agent that has a knowledge source.
- E. Zip the documents and upload the ZIP file to the chats.

Answer: BD

Explanation:

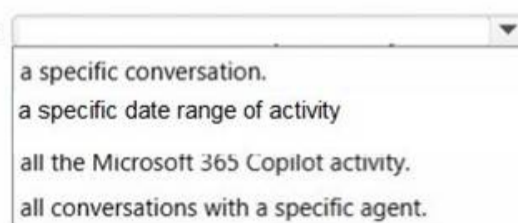

Microsoft 365 Copilot provides structured ways to persist and reuse knowledge sources to avoid repeatedly uploading the same files. Creating a notebook that references the five files (Option B) allows those documents to remain attached within a persistent workspace. Copilot can then consistently ground responses in those files without re-uploading them for every conversation. Creating an agent with a defined knowledge source (Option D) also provides a reusable solution. By configuring the five files as part of the agent's knowledge base, the agent can automatically reference them in future interactions. Saving a prompt does not persist file attachments. Fine-tuning models is not part of standard Microsoft 365 Copilot user workflows. Uploading a ZIP file does not improve reference management and may reduce accessibility of individual documents. Therefore, the correct solutions are to create a notebook that references the files and to create an agent with a knowledge source.

NEW QUESTION 14

HOTSPOT

Select the answer that correctly completes the sentence.
 a specific date range of activity

From the Microsoft 365 My Account portal , if you select Delete history for the Copilot activity history, you can delete

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

The Microsoft 365 My Account portal provides users with control over their Copilot activity history in alignment with enterprise privacy and compliance standards. When selecting Delete history, users can remove Copilot activity based on a defined time range rather than deleting only a single conversation or all activity universally. This functionality reflects Microsoft's commitment to transparency, user control, and responsible AI governance. Allowing deletion by date range enables

organizations and individuals to manage data retention policies efficiently while maintaining compliance with regulatory frameworks such as GDPR and internal data governance policies.

The other options are incorrect because deleting a specific conversation or all conversations with a specific agent is not the primary method offered in the My Account activity deletion setting. Instead, deletion is structured around activity time periods.

This capability reinforces generative AI best practices: secure data management, lifecycle control of AI interactions, and user-directed privacy management within enterprise environments.

NEW QUESTION 16

You plan to use a notebook in Microsoft 365 Copilot. What is the purpose of a notebook?

- A. to create a transcript of a conversation that you can easily email to other users
- B. to provide a private location that can be used to organize reference materials across related conversations
- C. to generate a summary of all the interactions you had with Copilot during a specific conversation

Answer: B

Explanation:

In Microsoft 365 Copilot, a Notebook is a focused, AI-powered workspace designed to organize reference materials for specific projects or topics. It acts as a curated container where you can bring together various resources--such as Word documents, PDFs, PowerPoint decks, meeting notes, and even previous Copilot chats--into one location.

Reference:

<https://support.microsoft.com/en-us/topic/how-microsoft-365-copilot-notebooks-works-4071d73d-8bdd-478f-8968-8dc1d7c3d43e>

NEW QUESTION 18

You use Microsoft 365 Copilot.

You need to delete all your conversations by using the least amount of effort.

What is the best approach to achieve the goal? More than one answer choice may achieve the goal. Select the BEST answer.

- A. the Microsoft 365 Copilot web app
- B. the My Account portal in Microsoft 365
- C. the Microsoft 365 Copilot desktop app
- D. the Settings app in Windows 11

A.

Answer: B

Explanation:

Microsoft provides centralized activity management controls through the My Account portal, which allows users to manage privacy settings, activity history, and data associated with Microsoft 365 services, including Copilot. When the requirement is to delete all conversations with minimal effort, the most efficient method is to use the account-level activity management tools rather than deleting conversations individually.

The My Account portal enables bulk management of Copilot activity data, allowing users to clear conversation history in a consolidated manner. This approach aligns with Microsoft's privacy-by-design framework, giving users control over their AI-generated interaction history without requiring administrative intervention. Using the Copilot web or desktop app would typically require manually deleting conversations one at a time, increasing effort. The Windows 11 Settings app is unrelated to Microsoft 365 Copilot data management.

Therefore, to delete all Copilot conversations efficiently and with the least amount of effort, the correct approach is to use the My Account portal in Microsoft 365.

NEW QUESTION 22

HOTSPOT

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
You can review the Microsoft 365 Copilot activity history from the My Account portal.	<input type="radio"/>	<input type="radio"/>
When you delete the Microsoft 365 Copilot activity history, you also immediately delete all the associated notebooks and pages.	<input type="radio"/>	<input type="radio"/>
Users can delete their entire Microsoft 365 Copilot activity history, including their prompts and the responses Copilot returns.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

Statements

You can review the Microsoft 365 Copilot activity history from the My Account portal.

When you delete the Microsoft 365 Copilot activity history, you also immediately delete all the associated notebooks and pages.

Users can delete their entire Microsoft 365 Copilot activity history, including their prompts and the responses Copilot returns.

Yes	No
<input checked="" type="radio"/>	<input type="radio"/>
<input type="radio"/>	<input checked="" type="radio"/>
<input checked="" type="radio"/>	<input type="radio"/>

NEW QUESTION 26

You receive several images from a colleague. You suspect that the images were generated by using Microsoft 365 Copilot. What can you use to verify whether the images were AI-generated?

- A. file names
- B. watermarks
- C. content credentials
- D. file descriptions

Answer: C

NEW QUESTION 28

HOTSPOT - Select the answer that correctly completes the sentence.

Answer Area

▼

The Common Data Model

Enterprise data protection (EDP)

Sensitivity labels

Zero Trust

_____ in Microsoft 365 Copilot ensures that business data stays within a Microsoft 365 tenant and is **NOT** used to train AI models.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

▼

The Common Data Model

Enterprise data protection (EDP)

Sensitivity labels

Zero Trust

_____ in Microsoft 365 Copilot ensures that business data stays within a Microsoft 365 tenant and is **NOT** used to train AI models.

NEW QUESTION 32

You are using Microsoft 365 Copilot to enhance your productivity in Microsoft Word. Which two tasks can you achieve by using Copilot in Word?

- A. Insert a table of contents based on the headings in your document.
- B. Insert a custom watermark that has specific text and formatting.
- C. Generate a summary of the key points in your document.
- D. Customize the page margins to match your company's document standards.

Answer: AC

Explanation:

Copilot in Word assists with content generation, summarization, rewriting, and structural organization. It can analyze document headings and insert a table of contents based on structured heading styles, supporting document navigation. It can also generate summaries of key points, which aligns directly with generative AI text analysis capabilities.

Custom watermark formatting and precise page margin configuration are traditional Word formatting functions and are not core generative AI capabilities of

Copilot.
Therefore, the correct answers are A and C.

=====

NEW QUESTION 35

You are a medical researcher.
You need to ensure that Microsoft 365 Copilot responds to you in a professional manner that is appropriate to your field. What is the best approach to achieve the goal?

- A. In the conversation, attach an example to your prompts.
- B. From Settings, configure Custom instructions.
- C. In the conversation, create a sample prompt and save it to the Copilot Prompt Gallery.
- D. From Settings, configure Copilot Memory.

Answer: B

Explanation:

Custom instructions allow users to define persistent preferences for tone, style, and response behavior across conversations. Microsoft documentation explains that Custom instructions help tailor Copilot responses to professional roles, communication styles, and domain expectations. For a medical researcher requiring consistently professional, field-appropriate responses, configuring Custom instructions in Settings ensures that Copilot maintains the desired tone and terminology in future interactions. Attaching examples influences only a single conversation. Saving prompts to the Prompt Gallery aids reuse but does not enforce tone globally. Copilot Memory stores factual preferences but is not intended for style configuration. Therefore, the best and most comprehensive approach is to configure Custom instructions in Settings.

NEW QUESTION 40

You are discussing Microsoft 365 Copilot with a colleague. The colleague asks which data Copilot uses to answer questions when using the Work scope. What should you tell your colleague?

- A. Copilot provides responses based only on the general knowledge that Copilot was trained on.
- B. Copilot provides responses based on all the data in your organization's Microsoft 365 environment and the general knowledge that Copilot was trained on.
- C. Copilot provides responses based only on data that the user can access and the general knowledge that Copilot was trained on.
- D. Copilot provides responses based only on data that the user can access.

A.

Answer: C

Explanation:

Microsoft 365 Copilot operates within two primary knowledge boundaries: its foundational large language model training data and the organizational data available within the Microsoft 365 tenant. However, Copilot strictly enforces Microsoft's security and compliance model, meaning it only retrieves and uses data that the signed-in user is authorized to access. When using the Work scope, Copilot combines the general knowledge it was trained on with organizational data such as documents, emails, chats, calendars, and files stored in Microsoft 365. Importantly, Copilot respects role-based access control and existing permissions. It does not surface information from content the user does not have access to. Option A is incomplete because Work scope includes organizational data. Option B is incorrect because Copilot does not access all tenant data indiscriminately; it is permission-scoped. Option D is incomplete because Copilot also leverages its general training knowledge. Therefore, the correct explanation is that Copilot provides responses based only on data the user can access, combined with its general training knowledge.

NEW QUESTION 42

You receive the following response to a prompt: "Sorry, it looks like I can't respond to this. Let's try a different topic." What is a possible cause of the response?

- A. The prompt is too vague to elicit a response.
- B. The prompt contains language that violates safety guidelines.
- C. The prompt contains more than five requests.
- D. The prompt is larger than the allowed context window.

Answer: B

Explanation:

Microsoft 365 Copilot follows Microsoft's Responsible AI principles and enforces strict content safety policies. When a prompt violates safety guidelines---such as containing harmful, abusive, illegal, or restricted content---the system may refuse to generate a response. The refusal message shown is consistent with safety filtering behavior. Generative AI systems include moderation layers that evaluate prompts before generating output. If the prompt is classified as unsafe or non-compliant with policy, Copilot blocks the request and encourages the user to try a different topic. A vague prompt typically results in a generic or clarifying response rather than a refusal. There is no fixed limit of five requests per prompt. Exceeding the context window usually results in truncation or processing errors, not a safety-based refusal message. Therefore, the most likely cause of the response is that the prompt contains language that violates safety guidelines.

NEW QUESTION 44

You are comparing the difference between Microsoft 365 Copilot and Microsoft 365 Copilot Chat. What is available in both versions?

- A. the Researcher agent
- B. Copilot Pages
- C. Copilot Notebooks

Answer: B

NEW QUESTION 49

You use Microsoft 365 Copilot to create a proposal in Microsoft Word based on a document in a Microsoft SharePoint library. You need to ensure that the information cited in the proposal is accurate. What is the best approach to achieve the goal? More than one answer choice may achieve the goal. Select the BEST answer.

- A. Manually verify the citations in the generated content.
- B. Use Copilot in Word to verify the citations.
- C. Create an agent that contains your organization's editorial standards and use the agent to verify the citations.
- D. Create a notebook that contains all the reference material and use the notebook to verify the citations.

Answer: A

NEW QUESTION 54

You run a saved prompt and receive the following response: "You asked for a summary of File.docx. However, the file appears to be either empty, corrupted, or in a format that I cannot process." What is a possible cause of the response?

- A. You did NOT schedule the prompt to run.
- B. You ran the prompt from a web app instead of a desktop app.
- C. You used the wrong agent to run the prompt.
- D. You do NOT have access to the file.

Answer: D

NEW QUESTION 57

HOTSPOT

Select the answer that correctly completes the sentence.

Answer Area

From Microsoft 365 Copilot, you can use  to help users begin conversations with an agent and guide the users to use the agent more effectively.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

From Microsoft 365 Copilot, you can use  to help users begin conversations with an agent and guide the users to use the agent more effectively.

NEW QUESTION 59

You are a marketing assistant preparing for a budget meeting with your manager. You need to evaluate key spending and performance trends from the last year to understand which marketing channels deliver the best return on investment (ROI). What should you use in Microsoft 365 Copilot to achieve the goal? More than one answer choice may achieve the goal. Select the BEST answer.

- A. the Analyst agent
- B. Chat
- C. the Researcher agent
- D. a notebook

Answer: A

NEW QUESTION 64

HOTSPOT

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
Microsoft 365 Copilot is trained on your organization's business data.	<input type="radio"/>	<input type="radio"/>
Microsoft 365 Copilot can summarize emails in mailboxes that were shared with you.	<input type="radio"/>	<input type="radio"/>
Microsoft 365 Copilot leverages the security framework defined in Microsoft 365 to provide you with access to emails, documents, and other enterprise data.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

Statements	Yes	No
Microsoft 365 Copilot is trained on your organization's business data.	<input type="radio"/>	<input checked="" type="radio"/>

Microsoft 365 Copilot leverages the security framework defined in Microsoft 365 to provide you with access to emails, documents, and other enterprise data.	<input checked="" type="radio"/>	<input type="radio"/>

NEW QUESTION 66

You have a Microsoft 365 subscription.

You do NOT have a Microsoft 365 Copilot license.

When you send a prompt in Microsoft 365 Copilot Chat, which three sources does Copilot Chat use to respond? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. chat data in Microsoft Teams
- B. your organization's databases
- C. the prompt context
- D. organizational data in Microsoft 365
- E. internet search data
- F. the conversation history

Answer: CEF

NEW QUESTION 71

HOTSPOT

Select the answer that correctly completes the sentence.

Answer Area

enables organizations to apply governance policies to conversations generated by using Microsoft 365 Copilot.

- Microsoft Defender for Cloud
- Microsoft Entra ID
- Microsoft Intune
- Microsoft Purview

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

- Microsoft Defender for Cloud
- Microsoft Entra ID
- Microsoft Intune
- Microsoft Purview

enables organizations to apply governance policies to conversations generated by using Microsoft 365 Copilot.
