NEW QUESTION 10

Your organization has a Microsoft 365 subscription. All users are assigned a Microsoft 365 Copilot license. You need to prevent the users from generating images by using Copilot. What should you use?

- A. the Microsoft Defender portal
- B. the Microsoft Purview portal
- C. the Microsoft 365 admin center
- D. the Microsoft Entra admin center

Answer: C

Explanation:

The correct answer is C. the Microsoft 365 admin center. Microsoft Learn documents a specific Copilot image generation setting in the Microsoft 365 admin center under Copilot>Settings>Copilot actions>Copilot image generation. Microsoft states that when this scenario is allowed, users can ask Copilot to create, design, and edit images. When it is not allowed, Copilot does not generate images and instead responds with stock or brand images. This directly matches the requirement to prevent users from generating images by using Copilot. The other options are incorrect because Microsoft does not document this control as being managed from Defender, Purview, or Entra for this scenario. Microsoft also separately notes that organizations can control access to Designer image generation through policy, but the admin experience for managing the Microsoft 365 Copilot scenario itself is explicitly surfaced in the Microsoft 365 admin center. Therefore, for an exam question focused on where an admin should go to disable image generation in Copilot, the best and documented answer is the Microsoft 365 admin center.

NEW QUESTION 14

NEW QUESTION 20

Your company is evaluating Microsoft 365 Copilot pay-as-you-go billing instead of purchasing a Microsoft 365 Copilot license. In which scenario can pay-as-you-go billing apply?

- A. generating a recap of a Microsoft Teams meeting
- B. using a custom agent that is grounded in work data
- C. performing multi-step reasoning by using the Researcher agent
- D. using the AI assistant to edit a document in Copilot in Word

Answer: B

NEW QUESTION 22

Your organization has a Microsoft 365 E5 subscription.

You need to ensure that a third-party cloud service can authenticate to Microsoft Entra. What should you configure?

- A. a Microsoft 365 Copilot connector
- B. multifactor authentication (MFA)
- C. a Conditional Access policy
- D. an app registration

Answer: D

NEW QUESTION 25

Your organization has a Microsoft 365 E5 subscription. You create a Microsoft Purview sensitivity label named Label1. You need to ensure that users can apply Label1 to files in Microsoft 365. What should you use?

- A. an auto-labeling policy
- B. a trainable classifier
- C. a retention label policy
- D. a sensitivity label policy

Answer: D

Explanation:

The correct answer is D. a sensitivity label policy. In Microsoft Purview, creating a sensitivity label by itself does not make it available to users. Microsoft Learn states that after you create sensitivity labels, you must publish them by creating a label policy so that users and groups can see and apply those labels in Microsoft 365 apps and services. Publishing controls which labels are available and to whom they are shown. This is why a sensitivity label policy is required to ensure that users can apply Label1 to files.

The other options do not meet the requirement. Auto-labeling policies apply labels automatically when content matches conditions, but they are not the primary mechanism for simply making a label available for user selection. A trainable classifier is used to identify content categories, not to publish a label. A retention label policy publishes retention labels for records and lifecycle purposes, which is different from sensitivity labeling for classification and protection. Therefore, the correct Microsoft-documented method to let users apply Label1 to files is to publish it using a sensitivity label policy.

Answer Area

John can [answer choice].

View all the users in the Microsoft Entra tenant

view all the content in Microsoft SharePoint sites

read all the content in Microsoft Exchange mailboxes

perform eDiscovery of Microsoft 365 Copilot prompts

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

The correct answer isView all the users in the Microsoft Entra tenant. In the exhibit, John is assigned theGlobal Readerrole. Microsoft documents that theGlobal Readerrole is intended for users who need toview administrator features and settings in admin centersthat a Global Administrator can view, but without edit permissions. That makes it appropriate for read-only visibility into tenant-wide directory and admin information, including users in Microsoft Entra. The other answer choices are not supported by the Global Reader role. Microsoft distinguishes admin-center visibility from access tocontentin workloads such asSharePoint sitesandExchange mailboxes. Global Reader is a read-only administrative role, not a content access role for reading all documents or mailbox items. Likewise,performing eDiscovery of Microsoft 365 Copilot promptsrequires Purview eDiscovery permissions or role group membership, not merely the Global Reader role. Microsoft documents eDiscovery permissions separately in Purview role groups. Therefore, based on the assigned role shown, the valid completion is that John canview all the users in the Microsoft Entra tenant.
