Microsoft

Exam Questions 98-365

Windows Server Administration Fundamentals

NEW QUESTION 1
Users report that they are unable to print. You verify that the print spooler service is running. What should you do next?

A. Purge the service
B. Disable the service
C. Pause the service
D. Restart the service

Answer: D

NEW QUESTION 2
HOTSPOT
For each of the following statements, select Yes if the statement is true. Otherwise, select No. Each correct selection is worth one point.

Answer Area

	Yes	No
A 32-bit client machine can use the 64-bit version of a printer driver.	○	○
A server can have multiple driver types installed for a single printer.	○	○
The print server must be 64-bit to support 64-bit and 32-bit clients.	○	○

A. Mastered
B. Not Mastered

Answer: A

Explanation:

Answer Area

	Yes	No
A 32-bit client machine can use the 64-bit version of a printer driver.	○	[○]
A server can have multiple driver types installed for a single printer.	[○]	○
The print server must be 64-bit to support 64-bit and 32-bit clients.	[○]	○

NEW QUESTION 3
By default, group policies are first applied to networked computers when the:

A. Computer is backed up.
B. Computer starts up.
C. User accesses a shared drive.
D. User runs gpresult.exe.

Answer: B

NEW QUESTION 4
HOTSPOT
For each of the following statements, select Yes if the statement is true. Otherwise, select
No. Each correct selection is worth one point.

Answer Area

	Yes	No
iSCSI storage solutions require a private network to communicate with host machines.	○	○
Fibre Channel storage requires ethernet to communicate with host machines.	○	○
Direct attached storage solutions require eSATA connections to attach to a host machine.	○	○

A. Mastered
B. Not Mastered

Answer: A

Explanation:

Answer Area

	Yes	No
iSCSI storage solutions require a private network to communicate with host machines.	○	◉
Fibre Channel storage requires ethernet to communicate with host machines.	○	◉
Direct attached storage solutions require eSATA connections to attach to a host machine.	○	◉

NEW QUESTION 5
You have an Active Directory infrastructure that contains one domain and seven domain controllers. How many forests can you have without creating any trusts?

A. 1
B. 7
C. 8

Answer: B

Explanation:
In a Windows Server 2003 forest, you can link two disjoined Windows Server 2003 forests together to form a one-way or two-way, transitive trust relationships. A two- way, forest trust is used to form a transitive trust relationship between every domain in both forests.

NEW QUESTION 6
Which technology is designed to help teams collaborate?

A. Microsoft SharePoint Server
B. Microsoft System Center Operations Manager
C. Microsoft Forefront Identity Manager
D. Microsoft BizTalk Server

Answer: A

Explanation:
 * Organizations use SharePoint to create websites. You can use it as a secure place to store, organize, share, and access information from almost any device. All you need is a web browser, such as Internet Explorer, Chrome, or Firefox.
* SharePoint Workspace A desktop program that you can use to take SharePoint site content offline and collaborate on the content with others while you are disconnected from the network. While you and other team members are offline, you can make changes to
* SharePoint content that will eventually synchronize back to the SharePoint site.
Incorrect:
not B: System Center 2012 – Operations Manager provides infrastructure monitoring that is flexible and cost-effective, helps ensure the predictable performance and availability of vital applications, and offers comprehensive monitoring for your datacenter and cloud, both private and public.
Not C: Microsoft Forefront Identity Manager 2010 R2 delivers self-service identity management for users, automates lifecycle management across heterogeneous platforms for administrators, and provides a rich policy framework for enforcing corporate security policies.
Not D: Microsoft BizTalk Server (or simply "BizTalk") enables companies to automate business processes, through the use of adapters which are tailored to communicate with different software systems used in an enterprise.

NEW QUESTION 7
An external storage unit that is self-contained and provides shared file-level access is referred to as:

A. Small Computer System Interface (SCSI).
B. Storage Area Network (SAN).
C. Network Attached Storage (NAS).
D. Direct Attached Storage (DAS).

Answer: C

Explanation:
 Network-attached storage (NAS) is file-level computer data storage connected to a computer network providing data access to a heterogeneous group of clients. NAS not only operates as a file server, but is specialized for this task either by its hardware, software, or configuration of those elements. NAS is often manufactured as a computer appliance – a specialized computer built from the ground up for storing and serving files – rather than simply a general purpose computer being used for the role.

NEW QUESTION 8
What is the name for a stand-alone digital storage system connected directly to a server or workstation HBA?

A. Small Computer System Interface (SCSI)
B. Direct Attached Storage (DAS)
C. Network Attached Storage (NAS)
D. Storage Area Network (SAN)

Answer: A

Explanation:
The term HBA applies to a variety of interconnects, it is most commonly used with storage protocols such as Fibre Channel (FC) and serial-attached SCSI (SAS). Note: A host bus adapter (HBA) is a circuit board and/or integrated circuit adapter that provides input/output (I/O) processing and physical connectivity between a host system, or
server, and a storage and/or network device.
Reference: http://searchstorage.techtarget.com/definition/host-bus-adapter

NEW QUESTION 9
Which task can you accomplish by using Organizational Units?

A. Apply shared folder permissions to users
B. Place different domains in a centralized manageable environment
C. Create a secondary Active Directory
D. Logically represent a hierarchical structure of your company

Answer: D

Explanation:
A particularly useful type of directory object contained within domains is the organizational unit. Organizational units are Active Directory containers into which you can place users, groups, computers, and other organizational units. An organizational unit cannot contain objects from other domains.
An organizational unit is the smallest scope or unit to which you can assign Group Policy settings or delegate administrative authority. Using organizational units, you can create containers within a domain that represent the hierarchical, logical structures within your organization.

NEW QUESTION 10
This question requires that you evaluate the underlined text to determine if it is correct. You need to troubleshoot network environment problems. First, you define the issues that
are most likely causing the symptoms. Then you eliminate each issue until the symptoms disappear.
This approach is referred to as "performance" troubleshooting.
Select the correct answer if the underlined text does not make the statement correct. Select "No change is needed" if the underlined text makes the statement correct.

A. Systematic
B. Specific
C. Trial and error
D. No change is needed

Answer: A

Explanation:
The ability to troubleshoot effectively reduces downtime and increases safety.
A Systematic approach brings efficiencies to the process of troubleshooting. Preparation
Step 1: Observe Behavior
Step 2: Define Problem Area Step 3: Identify Possible causes
Step 4: Determine Most Probable cause Step 5: Test and Repair
Follow-up
Reference: http://www.troubleshootingskills.com/how-it-works/systematic-approach/

NEW QUESTION 10
What is one advantage of application virtualization?

A. Fewer operating system updates
B. Improved collaboration
C. Reduced network traffic
D. Hardware consolidation

Answer: B

Explanation:
Some of the key benefits of Application Virtualization (App-V)include:
* Flexible virtualization: Businesses can connect separately packaged App-V applications, enabling them to communicate with each other and with traditionally installed applications. This gives businesses the best of both worlds, providing isolation – reducing conflict and time spent regression testing – yet allowing applications to interact and communicate when needed.
* An integrated platform
* Powerful management of virtualized applications
* Reference: https://www.microsoft.com/en-us/windows/enterprise/products-and- technologies/mdop/app-v.aspx

NEW QUESTION 14
Which is an advantage of 64-bit operating systems over 32-bit operating systems?

A. Larger amounts of accessible RAM
B. More device drivers
C. More compatible applications
D. Cheaper hardware

Answer: A

Explanation:
Can access a larger address space.

NEW QUESTION 15
The manager at the coffee house where you work asks for advice on adding storage to the store's server to perform backups.
The additional storage must meet the following requirements:
? Hold at least 600 GB
? Be reasonably priced
? Be reasonably fast
Which solution should you recommend?

A. USB hard drive
B. USB flash drive
C. SCSI tape backup system
D. External SCSI hard drive

Answer: C

NEW QUESTION 18
A domain controller that is designated to perform a set of specialized domain controller tasks is commonly referred to as a/an:

A. Windows Internet Name Service (WINS) server
B. Operations Master
C. Organizational Unit
D. Primary domain controller

Answer: B

Explanation:
 Operations Master Roles
The five operations master roles are assigned automatically when the first domain controller in a given domain is created.

NEW QUESTION 23
You need to apply a Windows Server 2008 group policy. You also need to prevent policies that are applied at lower levels from affecting this new policy.
What should you do?

A. Set the policy to Loopback
B. Set the permission to Full Control
C. Select the Enforced policy link setting
D. Select the Enabled policy link setting

Answer: C

Explanation:
 Example:
To enforce a Group Policy object link
? In the Group Policy Management Console (GPMC) console tree, double-click the
forest containing the domain, site, or organizational unit (OU) containing the link you want to enforce, and then do one of the following:
? Right-click the GPO link, and then click Enforced to enable or disable enforcing the
link. A check mark next to Enforced indicates that the link is enforced.

NEW QUESTION 26
Which tool would you use to retrieve detailed information about a significant occurrence in a computer system?

A. Event Viewer
B. System Information
C. System Monitor
D. Resource Monitor

Answer: A

NEW QUESTION 28
To enable enhanced keyboard and mouse functions for a Hyper-V virtual machine, you need to install:

A. Hyper-V Integration Components.
B. Keyboard and mouse drivers.
C. Microsoft Updates.
D. Hyper-V Server.

Answer: A

Explanation:
 To get a virtual machine (VM) to work properly, it's critical to install the Hyper-V integration components. These integration components install agents into a VM
that enable a host to successfully back up a VM, recognize when it has gone down, copy and paste data into and out of a VM, and synchronize its clock to the
host. These components are important to processing a VM's workload: In effect, their installation
reconfigures an operating system to make it "aware" that it has been virtualized, resulting in an "enlightened" OS.

NEW QUESTION 31
Which should you use to manage the working environments of users and computers in an Active Directory infrastructure?

A. Active Directory Domains and Trusts
B. Group Policy Objects
C. Builtin containers
D. Global security groups

Answer: B

Explanation:
A Group Policy Object (GPO) is a collection of settings that define what a system will look like and how it will behave for a defined group of users or computers.

NEW QUESTION 35
What is the minimum Windows Server version on which Hyper-V can be installed?

A. 2003 32-bit
B. 2003 64-bit
C. 2008 32-bit
D. 2008 64-bit

Answer: D

Explanation:
Hyper-V, formerly known as Windows Server Virtualization, is a native hypervisor that enables platform virtualization on x86-64 systems. A beta version of Hyper-V was shipped with certain x86-64 editions of Windows Server 2008, and a finalized version (automatically updated through Windows Update) was released on June 26, 2008.

NEW QUESTION 36
You turn on a computer. What happens first?

A. The operating system is loaded.
B. The boot sector is accessed.
C. The BIOS is loaded.
D. The Master Boot Record (MBR) is accessed.

Answer: C

NEW QUESTION 41
To protect a server in case of a blackout, you should use a/an:

A. Uninterruptible Power Supply.
B. Dedicated surge protector.
C. Power Supply Unit.
D. Redundant power supply.
E. Hot-swappable power supply.
F. Line conditioner.

Answer: A

NEW QUESTION 44
Which two are Windows Server Cluster types? (Choose two)

A. Shared storage
B. Failover
C. Network Load Balancing (NLB)
D. Shared services

Answer: BC

Explanation:
The difference between NLB and Windows Failover Cluster.
* An NLB array allows load to be spread amongst all the participating machines.
* A failover cluster provides high availability and redundancy, but doesn't spread the load.
* Only one server is live at any time, but the clustered application(s) can be moved to the other server very quickly.

NEW QUESTION 49
Which file storage system can be used on a Windows Server?

A. NFS
B. NTFS
C. EXT3
D. FAT16

Answer: B

NEW QUESTION 53
You need to monitor the performance of a server. What should you create first?

A. Baseline
B. Counters
C. Page File
D. Alerts

Answer: A

Explanation:
Later compare the performance to the baseline.

NEW QUESTION 55
The system partition on a Windows Server must always be installed to a:

A. Dynamic disk.
B. Simple volume.
C. NTFS volume.
D. FAT32 volume.

Answer: C

NEW QUESTION 59
You need to see what effect the applied group policies are having on an individual user or computer.
What should you use?

A. Local Users and Groups
B. Resultant Set of Policy
C. Local Security Policy
D. Effective Permissions

Answer: D

Explanation:
If you would like to find out what permissions a user or group has on an object, you can use the Effective Permissions tool. It calculates the permissions that are granted to the specified user or group. The calculation takes the permissions in effect from group membership into account, as well as any permissions inherited from the parent object. It looks up all domain and local groups in which the user or group is a member.

NEW QUESTION 61
What is required for a computer to print to either a local or a network printer?

A. 500 GB of free hard disk space
B. Printer Device Drivers
C. 1 GB of RAM
D. Administration tools

Answer: B

NEW QUESTION 62
You need to centralize administration of print servers and network printers. What should you use?

A. Print Management
B. Printers and Faxes
C. Device Manager
D. Print queue

Answer: A

Explanation:
There are two primary tools that you can use to administer a Windows print server in Windows Server 2008: Server Manager and Print Management.

NEW QUESTION 66
You need to control which Microsoft Office updates are automatically deployed to client computers. Which tool should you use?

A. Microsoft Office SharePoint Services (MOSS)
B. Windows Server Update Services (WSUS)
C. Windows Update
D. Microsoft Office Update

Answer: B

Explanation:
Windows Server Update Services (WSUS) enables information technology administrators to deploy the latest Microsoft product updates to computers that are running the Windows operating system. By using WSUS, administrators can fully manage the distribution of updates that are released through Microsoft Update to computers in their network.

NEW QUESTION 67
What must you install in order to host a Web site on a Windows Server?

A. Active Directory Sites and Services
B. Windows Internet Naming Service (WINS)
C. Fully Qualified Domain Name (FQDN)
D. Internet Information Server (IIS)

Answer: D

NEW QUESTION 70
You need to install storage device drivers for a Windows boot partition. When should you do this?

A. After you have started Windows for the first time
B. Before creation of the RAID array
C. During the post-boot phase
D. During the installation phase

Answer: D

Explanation:
 Example:
During the first phase of the Windows XP installation, Setup displays the following message at the bottom of the screen:
Press F6 if you have to install a third-party SCSI or RAID driver.
Press F6 and then follow the instructions to install a mass-storage device driver from your Original Equipment Manufacturer (OEM).

NEW QUESTION 74
Which two files are executed so that a Windows 2008 R2 server boots into the operating system? (Choose two.)

A. winload.exe
B. ntldr.exe
C. bootmgr.exe
D. boot.ini

Answer: AC

Explanation:
 A: The Windows Boot Manager invokes winload.exe—the operating system boot loader—to load the operating system kernel executive (ntoskrnl.exe) and core device drivers. In that respect, winload.exe is functionally equivalent to the operating system loader function of NTLDR in prior versions of Windows NT.
C: Windows Vista and later operating systems replaced the NTLDR with the Windows Boot Manager (BOOTMGR). The BOOTMGR file is located in the 100 MB system partition automatically created during the Window 7 and Server 2008 R2 installation. In Windows Vista and Server 2008 the file is located in the System Partition. Once the computer is started the boot sector loads the BOOTMGR which in turn looks for an active partition.
Incorrect:
Not B, not D: In legacy operating systems the boot sector (boot strap loader) loads the NTLDR that would then look for the BOOT.INI.
Reference: http://en.wikipedia.org/wiki/Windows_Vista_startup_process

NEW QUESTION 78
HOTSPOT
For each of the following statements, select Yes if the statement is true. Otherwise, select No. Each correct selection is worth one point.

Answer Area

	Yes	No
The local Administrator account on a Windows Server 2008 R2 server can be renamed.	○	○
The local Administrator account on a Windows Server 2008 R2 server can be deleted.	○	○
The local Administrator account on a Windows Server 2008 R2 server is disabled by default.	○	○

A. Mastered
B. Not Mastered

Answer: A

Explanation:
Answer Area

	Yes	No
The local Administrator account on a Windows Server 2008 R2 server can be renamed.	◉	○
The local Administrator account on a Windows Server 2008 R2 server can be deleted.	○	◉
The local Administrator account on a Windows Server 2008 R2 server is disabled by default.	○	◉

NEW QUESTION 79
You manage a company's Active Directory. You need to delegate the control of a branch office to a set of administrators. Where would you place the users and computers that belong to the branch office?

A. In a distribution group
B. In an Organizational Unit
C. In the root of the domain
D. In the Built-in container

Answer: B

NEW QUESTION 82
DRAG DROP
In which order are group policies applied?
(To answer, move the appropriate scopes from the list of scopes to the answer area and arrange them from first applied to last applied)

Scopes	Answer Area
Domain	
Local	
Organizational Unit	
Site	

A. Mastered
B. Not Mastered

Answer: A

Explanation:

Scopes	Answer Area
Domain	Local
Local	Site
Organizational Unit	Domain
Site	Organizational Unit

NEW QUESTION 84
You configure Volume Shadow Copy Service (VSS) to save previous versions of a shared folder. By default, the copies of shared folders are stored in:

A. A Network Attached Storage (NAS) device.
B. A Distributed File System (DFS) share.
C. A failover cluster.
D. A local volume.

Answer: D

Explanation:
 Shadow Copy technology requires the file system to be NTFS to be able to create and store shadow copies. Shadow Copies can be created on local and external (removable or network) volumes by any Windows component that uses this technology, such as when creating a scheduled Windows Backup or automatic System Restore point.

NEW QUESTION 88

Your relative is the owner of Humongous Insurance, and you provide part time IT support for the company's Windows desktops and servers. All of its computers are on a private network behind a firewall.
Because you are going away to college, you need a secure method to manage the servers and desktops.
Which two Windows 2008 R2 features should you use? (Choose two.)

A. VPN Server
B. Hyper-V
C. Remote Desktop
D. Active Directory Federation Services
E. FTP Server

Answer: AC

Explanation:
 You can set VPN Server or Remote Desktop to securely access the network remotetly.

NEW QUESTION 89
You need to restart the print spooler on a Windows Server 2008 R2 server. Which tool should you use?

A. Devices and Printers
B. The Device Manager
C. Printer Properties
D. The Services console

Answer: D

Explanation:
 You can restart a service from the Services applet (available in Administrative Tools).

NEW QUESTION 94
Which type of license is required to connect remotely to an application?

A. Windows Server External Connector License
B. Remote Desktop Services Client Access License
C. System Center Operations Manager Client Management License
D. Remote Server Application License

Answer: B

Explanation:
 Remote Desktop Services Client Access License is used to access applications on a Windows server.

NEW QUESTION 97
You want to receive a notification when your server's processor exceeds 80 percent utilization. You should create a:

A. Performance Alert.
B. Scheduled task.
C. Performance Log.
D. Performance counter.
E. System Event.

Answer: A

NEW QUESTION 102
......

Thank You for Trying Our Product

We offer two products:

1st - We have Practice Tests Software with Actual Exam Questions

2nd - Questons and Answers in PDF Format

98-365 Practice Exam Features:

* 98-365 Questions and Answers Updated Frequently

* 98-365 Practice Questions Verified by Expert Senior Certified Staff

* 98-365 Most Realistic Questions that Guarantee you a Pass on Your FirstTry

* 98-365 Practice Test Questions in Multiple Choice Formats and Updatesfor 1 Year

100% Actual & Verified — Instant Download, Please Click
[Order The 98-365 Practice Test Here](https://www.certshared.com/exam/98-365/)
