Which port is used for communication between the server and the Cisco Integrated Management Controller?

- A. ports on the adapter card
- B. management Ethernet port
- C. LAN on the motherboard port
- D. fabric uplink port

Answer: C

NEW QUESTION 8

Which action occurs first when a device that has the POAP feature boots and cannot find the startup configuration?

- A. The device locates a DHCP server
- B. The device enters POAP mode
- C. The device obtains the IP address of a TFTP server
- D. The device installs software image and a configuration file

Answer: B

Explanation:

PowerOn Auto Provisioning (POAP) automates the process of upgrading software images and installing configuration files on devices that are being deployed in the network for the first time. When a device with the POAP feature boots and does not find the startup configuration, the device enters POAP mode, locates a DHCP server, and bootstraps itself with its interface IP address, gateway, and DNS server IP addresses. The device also obtains the IP address of a TFTP server

or the URL of an HTTP server and downloads a configuration script that enables the switch to download and install the appropriate software image and configuration file

NEW QUESTION 9
