

Microsoft

Exam Questions MB6-894

Development, Extensions and Deployment for Microsoft Dynamics 365 for Finance and Operations

NEW QUESTION 1

You create a new class named NewClass1 in a model. NewClass1 manipulates the CustTable table in the protected method modifyCustTable.

NewClass1 has the following code: class NewClass1

```
{
public static MainClass1 construct()
{
return new MainClass1();
}
protected void modifyCustTable()
{
...
}
}
```

In the same model as NewClass1, you create a new class named NewClass2. You want to run the code in

the modifyCustTable method from the callModifyCustTable method in NewClass2. What is a correct example of calling the modifyCustTable method from NewClass2?

- A. {public static NewClass2 construct(){return new NewClass2();}public void callModifyCustTable(){NewClass1 newClass1 = NewClass1::construct(); newClass1.modifyCustTable();}}
- B. class NewClass2{public static NewClass2 construct(){return new NewClass2();}public void classModifyCustTable(){newClass1.modifyCustTable();}}
- C. class NewClass2 extends NewClass1{public static NewClass2 construct(){return new NewClass2();}public void callModifyCustTable(){this construct().modifyCustTable();}}
- D. class NewClass2 extends NewClass1{public static NewClass2 construct(){return new NewClass2();}public void callModifyCustTable(){this.modifyCustTable();}}

Answer: D

Explanation:

Section: Read and Write Basic X++ (20-25%)

NEW QUESTION 2

Compile and build the mpos/Cloud POS to regenerate the proxy.

6. Developers on your team need to use IntelliSense during the coding process by supplying a list of potential elements from the Application Object Tree (AOT).

Because you are converting from an earlier version of the MorphX environment that did not have IntelliSense, you need to explain advantages of IntelliSense to the development team.

Which two descriptions should you provide to your team? Each correct answer presents a complete solution.

- A. It helps maintain consistent spelling of elements.
- B. It prompts the user for known methods and possible choices.
- C. It consumes assemblies directly within the application.
- D. It can efficiently reference classes that are available in other .NET assembly DLL files.

Answer: BD

NEW QUESTION 3

You are working for a client who has a cloud-hosted production system on Microsoft Dynamics 365 for

Finance and Operations.

The client requests for you to apply to a package to the Production environment. What should you do?

- A. Log onto each Production AOS cloud-hosted server, and use ModelUtil.exe to import the package into the Production model store.
- B. Generate a runbook for the package by using AXUpdateInstaller.exe, and execute the runbook on each Production AOS cloud-hosted server.
- C. Log into Lifecycle Services (LCS) for the client's project, view the details for the Production environment, click on Maintain, and then Apply updates.
- D. Log into Lifecycle Services (LCS) for the client's project, click on Service requests, and, then create a service request to apply the package.

Answer: C

Explanation:

References:

<https://docs.microsoft.com/en-us/dynamics365/unified-operations/dev-itpro/deployment/apply-deployablepackage-system>

NEW QUESTION 4

What are two benefits of applying a form pattern to a form? Each correct answer presents part of the solution.

- A. ensures data consistency by enforcing common relationship patterns between datasources
- B. provides default values for many properties on controls
- C. enforces a consistent style so that the forms a user encounters are immediately recognizable
- D. allows a developer to create many delivered forms from a base form

Answer: BC

Explanation:

Section: Manage the User Interface and Security for Developers (20-25%) Explanation

Explanation/Reference:

Microsoft Dynamics 365 for Finance and Operations, Enterprise Edition, makes development easier by providing a guided experience for applying patterns to forms to ensure they are correct and consistent.

They help validate forms and control structures and the use of controls in certain places. Using patterns also ensures that each new form encountered by a user is immediately recognizable in appearance and function. Form patterns can provide many default control properties, which leads to a more guided development experience.

NEW QUESTION 5

You have built a package to deploy retail modifications into a source environment for multiple models. What is a result of building this package?

- A. Build artifacts are removed from the previous build.
- B. The .NET module that contains the element is incorporated.
- C. Only recently changed objects are rebuilt.
- D. Only the elements for the current project are built.

Answer: B

Explanation:

<https://docs.microsoft.com/en-us/dynamics365/unified-operations/dev-itpro/dev-tools/build-operations>

NEW QUESTION 6

You need to explain to a team member the difference between TempDB and InMemory table types. In which three ways do TempDB table types differ from InMemory table types for reporting? Each correct answer presents part of the solution.

- A. TempDB tables have a persistent database schema, and the data is deleted when the table goes out of scope.
- B. TempDB tables are created and destroyed upon use, which not take any database schema space.
- C. TempDB tables are for the storage of large data sets and do not allow exchanging between RAM and disk space.
- D. TempDB tables are used for small data sets that are under 128 KB in size.
- E. TempDB tables are used when you are unsure of the size of the data set returned.

Answer: ACE

Explanation:

Section: Develop new elements by using Application Explorer (20-25%) Explanation

Explanation/Reference:

Temp DB tables have a persistent schema in the database, but they are configured to delete table data when references to the table go out of scope.

An important thing to remember about in-memory tables is that once the table size exceeds 128 kilobytes, the system begins to allocate additional space between the RAM and disk space, which can cause performance to suffer. Because of this, it is recommended to use temp DB tables to handle larger temporary datasets.

Temp DB tables are often used to store data from reports, as report data is usually temporary and that it is not needed after the report is closed.

NEW QUESTION 7

Your coding team is moving from the Peri programming language to X++ code, and you need to explain the key operations of the X++ language to junior programmers.

Which operator decrements the current value of the variable on the left by the expression on the right?

- A. -=
- B. =
- C. -
- D. - -

Answer: A

Explanation:

References:

<https://docs.microsoft.com/en-us/dynamics365/unified-operations/dev-itpro/dev-ref/xpp-operators>

NEW QUESTION 8

You manage a Microsoft Dynamics 365 for Retail environment. You are preparing to deploy packages.

Which two types of items can you deploy as a package? Each correct answer presents a complete solution.

- A. a binary hotfix to the Application Object Server (AOS) runtime components
- B. an updated Dynamics 365 for Retail customization package
- C. a Microsoft Dynamics 365 Language Pack
- D. a Retail Software Development Kit (SDK)

Answer: AB

Explanation:

Section: Develop and extend retail components (15-20%)

Explanation/Reference:

A deployable package is a unit of deployment that can be applied in any Microsoft Dynamics 365 for Retail environment. A deployable package can be a binary hotfix to the Application Object Server (AOS) runtime components, an updated Dynamics 365 for Retail customization package, or a new Microsoft Dynamics 365 for Retail customization/application module package.

NEW QUESTION 9

You are an Independent Software Vendor (ISV) developer, and you are writing a custom job by using the SysOperation framework.

The job needs to report informational messages.

Which block of code will report an informational message without a request for user intervention?

```
A. void reportInformationalMessage(str _message)
{
    Box: :info(_message);
}

B. void reportInformationalMessage(str _message)
{
    info(_message);
}

C. void reportInformationalMessage(str _message)
{
    print _message;
}

D. void reportInformationalMessage (str _message)
{
    setPrefix(_message);
}
```

- A. Option A
- B. Option B
- C. Option C
- D. Option D

Answer: B

NEW QUESTION 10

Which of the Microsoft Dynamics 365 for Finance and Operations application stack provides financial and human resources management functionality?

- A. Application Suite
- B. Application Object
- C. Application Foundation
- D. Application Platform

Answer: A

Explanation:

Section: Understand the architecture and development environment (20- 25%)

Explanation/Reference:

Most of the functionality we associate with Dynamics 365 for Finance and Operations is added in the Application Suite. Specific examples include the financial management, inventory or warehouse management, human resources management or the fleet management scenario.

NEW QUESTION 10

You want to create a new security policy named VendGroupSecPolicy that causes users who are assigned a specific role to view the vendors in vendor group 100 only.

You have created a policy query named VendGroup100Policy and designed it so that the VendTable is the primary table. The users that will be affected by VendGroupSecPolicy must be categorized into an existing security role named VendGroup100XDSRole.

You set the Query property on VendGroupSecPolicy to VendGroup100Policy and the Primary Table property to VendTable.

Which values should you set on the properties on VendGroupSecPolicy?

- A. Set the Context String property to VendGroup100XDSRole and the Context Type property to ContextString.
- B. Set the Context String property to VendGroup100XDSRole and the Context Type property to RoleName.
- C. Set the Role Name property to VendGroup100XDSRole and the Context Type property to RoleName.
- D. Set the Role Name property to VendGroup100XDSRole and the Context Type property to ContextString.

Answer: C

Explanation:

References:

<https://msdn.microsoft.com/en-us/library/hh300643.aspx>

NEW QUESTION 14

You are planning to deploy Microsoft Dynamics 365 for Finance and Operations and need to select server architecture.

Which advantage is unique to the Local Business Data deployment option?

- A. It does not require a locally-installed client and is designed to generate web pages that are accessible on any Internet browser.
- B. It is deployed to the cloud using Azure Infrastructure as a Service (IaaS) so that internal IT will not have to support local hardware.
- C. It can be subscribed to as a Software as a Service (SaaS) so that no local hardware is utilized and all updates are managed by Microsoft.

D. It utilizes Service Fabric standalone clusters that can be deployed on a Windows 2016 server that resides both in the cloud and on premise.

Answer: D

NEW QUESTION 16

You are writing a method to update the Customer reference field on a Sales order table record. You begin by writing the following code:

```
class ExampleClass
{
    /// <summary>
    /// Update the Customer reference field on the Sales orders table.
    /// </summary>
    /// <param name = "_salesId">
    /// Sales order to update
    /// </param>
    /// <param name = "_customerRef">
    /// Updated Customer reference value
    /// </param>
    public static void updateSalesTableCustomerReference(SalesId _salesId, CustRef _customerRef)
    {
        SalesTable salesTable;
    }
}
```

Which statement will complete the method?

- A. salesTable = SalesTable::find(_salesId); salesTable.CustomerRef = _customerRef; salesTable.update();
- B. update_recordset salesTable setting CustomerRef=_customerRef where salesTable.salesid==_salesId;
- C. salesTable = SalesTable::find(_salesId, true); salesTable.CustomerRef = _customerRef; salesTable.update();
- D. update_recordset salesTable setting SalesId = _salesId where salesTable.CustomerRef == _customerRef;

Answer: C

Explanation:

Section: Read and Write Basic X++ (20-25%)

NEW QUESTION 19

You finish developing a model named CompletedModel1 that contains objects.

Which three items from the model must be included to build the CompletedModel1 model during the package build on the build server? Each correct answer presents part of the solution.

- A. CompletedModel1 build result file
- B. Metadata of objects in CompletedModel1
- C. Source code of objects in CompletedModel1
- D. Visual Studio solution file
- E. CompletedModel1 descriptor file

Answer: BCE

Explanation:

Section: Understand the architecture and development environment (20- 25%)

Explanation/Reference:

A Dynamics AX package is a deployment and compilation unit of one or more models. It includes model metadata, binaries, cubes and other associated resources. One or more AX packages can be packaged into a deployment package, which is the vehicle used for deployment on UAT and production environments. Packages are packaged into a deployable package file for deployment to Sandbox or production environments.

NEW QUESTION 24

You are an Independent Software Vendor (ISV) developer who is creating a new module in a solution. As part of the solution, you create a new menu. You need the menu to appear in the list of modules available on the navigation pane. What should you do to achieve this goal?

- A. Create an extension of the MainMenu menu, and add a menu reference to the new menu.
- B. Create an extension of the NavPaneMenu menu, and add a menu reference to the new menu.
- C. Create an extension of the CommonMenu menu, and add a menu reference to the new menu.
- D. Create an extension of the StartPageMenu menu, and add a menu reference to the new menu.

Answer: A

Explanation:

Section: Manage the User Interface and Security for Developers (20-25%)

NEW QUESTION 28

You are installing Microsoft Dynamics 365 for Retail in a store location that has limited Internet connectivity.

You need to implement a solution that supports multiple point-of-sale (POS) devices that have shared shifts.

Which component should you install to achieve this goal?

- A. Retail Headquarters
- B. Retail Store Scale Unit
- C. Commerce Runtime (CRT)

D. Retail Software Development Kit (SDK)

Answer: B

Explanation:

References:

<https://docs.microsoft.com/en-us/dynamics365/unified-operations/retail/retail-components>

NEW QUESTION 33

You are a system administrator for a company's Microsoft Dynamics 365 for Finance and Operations – Retail live environment.

You are responsible for ensuring the environment runs smoothly.

In which scenario would you need to monitor diagnostic data in the hot path?

- A. One of the servers in the environment crashed, and you need to troubleshoot the cause of the crash.
- B. Telemetry data from other components in your hybrid cloud are not being replicated or backed up.
- C. The environment is experiencing performance issues, and you suspect that it is due to hardware issues.
- D. Errors exist in one of the Retail Server components, and you need to troubleshoot the root cause of the issues.

Answer: C

NEW QUESTION 37

What are the three types of menu items used in Microsoft Dynamics 365 for Finance and Operations?

Each correct answer presents part of the solution.

- A. Form
- B. Output
- C. Action
- D. Display
- E. Report

Answer: BCD

Explanation:

Section: Manage the User Interface and Security for Developers (20-25%)

Explanation

Display Menu item: This folder is used to contain menu items that reference runnable objects which are primarily for presenting data to the user such as forms and dialog's.

Output Menu item: An output menu item should have the sole purpose to print a result, mostly used for referencing classes.

Action Menu item: As the name says it, you should create a menu item under this folder if your runnable object has an action to perform, for example creating or updating data.

NEW QUESTION 39

You are working in a model that extends the Application Suite model. You create an Action menu item named ActivateOrder, and you extend the SalesTable form by adding the ActivateOrder menu item to the

ActionPane.

You also have a TradeSalesClerk role that contains the SalesOrderMaintain duty. This duty contains the

SalesTableDetailsMaintain privilege, and this privilege contains an entry point to the SalesTable form.

You need to grant the TradeSalesClerk role access to the ActivateOrder menu. What are two possible ways to achieve this goal? Each correct answer presents a complete solution.

- A. Extend the SalesTableDetailsMaintain privilege, and add the ActivateOrder menu item as an entry point to the SalesTableDetailsMaintain privilege.
- B. Create a new duty, and create a new privilege
- C. Add the ActivateOrder menu item as an entry point to the new privilege, and add the new privilege to the new duty
- D. Extend the TradeSalesClerk role, and add the new duty.
- E. Create a new privilege, and add the ActivateOrder menu item as an entry point
- F. Extend the SalesOrderMaintain duty, and add the new privilege.
- G. Customize the SalesTableDetailsMaintain privilege, and add the ActivateOrder menu item as an entry point to the SalesTableDetailsMaintain privilege.

Answer: BC

Explanation:

Section: Manage the User Interface and Security for Developers (20-25%)

Explanation/Reference:

As of the current release for Dynamics 365 for Finance and Operations, you cannot extend a privilege.

NEW QUESTION 44

You are an Independent Software Vendor (ISV) developer adding functionality to an existing solution. The solution's model has a label file of XYZen-US.label.txt.

You finish creating a job and an action menu item to launch the job. You need to create a new label in the label file for the menu item.

Which two steps are recommended when creating the label? Each correct answer presents part of the solution.

- A. Search for the text of the new label to ensure there are no duplicates.
- B. Give the new label a meaningful Label ID after clicking the New button.
- C. Use all capital letters and numbers for the Label ID of the new label.
- D. Use the Label ID generated by the editor after clicking the New button.

Answer: AD

Explanation:

References:

<https://msdn.microsoft.com/en-us/library/aa620083.aspx>

NEW QUESTION 45

You are a developer for an Independent Software Vendor (ISV).

You need to create and modify enumerations within Microsoft Dynamics 365 for Finance and Operations.

Which two statements are true about using extensible enumerations? Each correct answer presents a complete solution.

- A. Integer values that belong to the baseline enum are deterministic.
- B. The default base enum value can be changed.
- C. The Label property on the extended base enum can be modified.
- D. The Label property on any base enum value can be modified.

Answer: AC

Explanation:

References:

<https://docs.microsoft.com/en-us/dynamics365/unified-operations/dev-itpro/extensibility/add-enum-value>

NEW QUESTION 47

You are writing an X++ method to delete a SalesLine record.

You need to ensure that the call to the delete() method succeeds.

Which two criteria must be met to accomplish this goal? Each correct answer presents part of the solution.

- A. The record to delete must have been read from the database using the forupdate keyword in a select statement.
- B. The dispose() method must be called after the delete() method is called.
- C. The delete() method must be called inside a transaction by using the ttsbegin and ttscommit statements.
- D. The record to delete must be locked first by calling the selectLocked() method.

Answer: CD

NEW QUESTION 48

You are working for a client in a new Microsoft Dynamics 365 for Finance and Operations environment.

The client requests that custom fields be added to the SalesTable table. You need to add them in a way to minimize the cost of maintenance and upgrading.

What should you do to add the custom fields?

- A. Create a new package in the ApplicationSuite model.
- B. Create a new model that overlays the ApplicationSuite model.
- C. Create a new extension model that references the ApplicationSuite model.
- D. Create a new project in the ApplicationSuite model.

Answer: C

Explanation:

Section: Understand the architecture and development environment (20-25%) Explanation

Explanation/Reference:

Microsoft's best practice recommendation is to use extension objects and models wherever we can.

NEW QUESTION 51

Which two components of the server architecture of Microsoft Dynamics 365 for Finance and Operations work in conjunction with one another to present web page accessibility through a supported web browser?

Each correct answer presents part of the solution.

- A. Forms Engine
- B. Cache
- C. Data Access Layer
- D. Interaction Layer

Answer: AD

Explanation:

Section: Understand the architecture and development environment (20-25%) Explanation

Explanation/Reference:

We can also connect through the user interface interaction layer, and we also have the forms engine. It's important to note that there's no longer a hard client involved in the server architecture as the form engines and interaction layer are designed to generate Web pages accessible on any Internet browser.

NEW QUESTION 56

According to best practices for Microsoft Dynamics 365 for Finance and Operations, in which two situations should you use labels? Each correct answer presents a complete solution.

- A. when accessing external resources such as web servers
- B. when specifying user interface text for menu items, forms and reports
- C. when programming for all external strings
- D. when specifying the resource for a form image control

Answer: BC

Explanation:

References:

<https://msdn.microsoft.com/en-us/library/aa620083.aspx>

NEW QUESTION 59

Your development team plans to use the new API exposed in Commerce Runtime (CRT) to set/get or validate values based on enum type. Which two benefits will your team gain from using the new API in this manner? Each correct answer presets a complete solution.

- A. They can directly map between Finance and Operations enums and CRT enums without manually creating the enums in CRT.
- B. They can easily override or add triggers at specific extension points instead of owning the entire service or operation.
- C. They can help skip certain checks used to override the entire calculate service by adding pre/post triggers for the validation check.
- D. They can have multiple partners and ISVs create extensible enums and use them independently without any code merge.

Answer: AD

Explanation:

Section: Develop new elements by using Application Explorer (20-25%) Explanation

Explanation/Reference:

With the new extensible enum exposed in CRT, you can directly map between Finance and Operations enums and CRT enums without manually creating the enums in CRT. Multiple partners and ISVs can create extensible enums and use them in their code independently without any code merge.

NEW QUESTION 63

You are evaluating the following code:

```
01 Int variableA, variable;
02
03 Try
04 {
05     variableA = 5;
06     variableB = 20;
07     variableB -= variableA;
08     if (variableB > variableA)
09     {
10         throw error ("An error has occurred.");
11         error ("Variable cannot be less than variableA");
12     }
13 }
14 Catch (Exception: : Error)
15 {
16     error("Process was aborted");
17 }
```

What is the output of this statement?

A

VariableB cannot be less than variableA
Process was aborted

B

An error has occurred.
VariableB cannot be less than variableA
Process was aborted

C

An error has occurred.
Process was aborted

D

An error has occurred.
VariableB cannot be less than variableA

- A. Option A
- B. Option B
- C. Option C
- D. Option D

Answer: C

Explanation:

References:

<https://msdn.microsoft.com/en-us/library/aa893385.aspx>

NEW QUESTION 65

You are planning to use X++ to develop a solution that will update multiple records.

You need to ensure that if the solution attempts to modify records that are currently being edited by a user, the operation will be retried.

Which type of exception should you handle?

- A. UpdateConflict
- B. CodeAccessSecurity
- C. UpdateConflictNotRecovered
- D. Deadlock

Answer: A

Explanation:

Section: Read and Write Basic X++ (20-25%)

Explanation/Reference:

UpdateConflict: Indicates that an error has occurred in a transaction that is using Optimistic Concurrency Control. The transaction can be retried (use a retry statement in the catch block).

NEW QUESTION 69

You need to add indexes to a table.

Which two best practices should you follow? Each correct answer presents part of the solution.

- A. Determine how the table should be organized by specifying a clustered index.
- B. Specify a primary index to determine the unique key on the table.
- C. Maintain indexes by making changes directly in the database.
- D. Add as many indexes as possible, since more indexes will lead to better performance.

Answer: AB

Explanation:

Section: Develop new elements by using Application Explorer (20-25%)

Explanation/Reference:

You'll always maintain indexes in a development environment using the table designer versus making changes directly in the database.

You'll always specify a clustered index to determine how the table should be organized. You should always specify a primary index to determine the unique key on the table.

You should only add the index if the speed improvements gained are greater than the cost to update the index.

To maintain efficiency of the index, you should limit the number of columns that you use in the index.

It's important to not create duplicate indexes.

NEW QUESTION 70

You need to troubleshoot an issue by using the Async sync library.

Where should you go to access this library?

- A. Real Time Service
- B. Reatil Server
- C. Retail Modern POS
- D. Channel Database

Answer: C

Explanation:

Section: Develop and extend retail components (15-20%)

Explanation/Reference:

Retail modern POS includes the Async library which downloads any available data packages and inserts them into the offline database.

NEW QUESTION 73

You create a new form to allow users to edit records in the Customer table. You need to prevent users from deleting any customer records.

What should you do to achieve this goal?

- A. On the CustTable data source on the form, set the Allow Delete property to No.
- B. Remove the Delete command button from the form.
- C. On the form design, set the View Edit Mode property to View.
- D. Implement an OnDeleted event handler to prevent the deletion.

Answer: A

NEW QUESTION 76

You are debugging in X++ and review the following method:

```
public boolean bestPracticeCheck(Integr _param)
{
    Integr var1, var2;

    var1 = 10;
    _param += var1;

    if (_param > 0)
    {
        return true;
    }
    else
    {
        return false;
    }
}
```

Which three best practices does this method violate? Each correct answer presents part of the solution.

- A. The method does not assign a value to the variable var2.
- B. The If and Else statements should not use braces because each statement is only one line.
- C. The parameter _param should be assigned using the format _param = _param + var1.
- D. The method manipulated the parameter _param.
- E. The return keyword is used in both the If and the Else statements.

Answer: ADE

NEW QUESTION 80

A junior programmer asks you to review an order of operator precedence so that a math operation evaluates appropriately. Which list is ordered correctly?

- A. unary, multiplicative, additive, logical, relational
- B. shift, relational, additive, unary, logical
- C. unary, multiplicative, additive, relational, logical
- D. equality, multiplicative, additive, relational, unary

Answer: C

Explanation:

Section: Read and Write Basic X++ (20-25%) Explanation/Reference:

Operators, in order of precedence

Unary
 Multiplicative, shift, bitwise AND, bitwise exclusive OR
 Additive, bitwise inclusive OR
 Relational, equality
 as is
 Logical (AND, OR)
 Conditional

Syntax

- ~ !
 * / % DIV << >> & ^
 + -
 < <= == != > >= like
 &&
 ? :

NEW QUESTION 82

You are working in a Microsoft Dynamics 365 for Retail environment and need to develop an app that can be installed on a tablet to calculate the sales total with tax for a given list of items.

The app must work if the tablet loses wireless connectivity. Which type of interface should you use to develop the app?

- A. Cloud POS
- B. User Interface
- C. eCommerce
- D. Modern POS

Answer: D

Explanation:

Section: Understand the architecture and development environment (20- 25%)

Explanation/Reference:

Users of Retail Modern Point of Sale (POS) can perform various retail tasks on supported laptops, tablets, and phones. These tasks include processing sales transactions, viewing customer orders, managing daily operations and inventory, and viewing role-based reports.

NEW QUESTION 86

You are an Independent Software Vendor (ISV) developer who is part of a team that is developing a new Microsoft Dynamics 365 for Finance and Operations solution for a client.

Another developer adds a resource item to the model.

In which two ways can you use this resource? Each correct answer presents a complete solution.

- A. as a visual element of an Image control
- B. as the banner of the application dashboard
- C. as an icon on a Tile item
- D. as an Assembly in the model

Answer: BC

NEW QUESTION 87

You are an Independent Software Vendor (ISV) developer and are reviewing another developer's changes to a project.

You run the Best Practices Fixer on the project. The following error message appears in the error list in

Visual Studio for the display menu item XYZ:

BP Rule: [BPErrorMenuItemNotCoveredByPrivilege]:Path: [dynamics://MenuItemDisplay/ XYZ]:BPErrorMenuItemNotCoveredByPrivilege: 'AxMenuItemDisplay' 'XYZ' is not covered

by privilege: XYZ (USR) [YourModule]

Based on this error message, which recommendation should you make to the developer?

- A. Add the XYZ display menu item to the Entry Points of a new or existing Security Privilege in theYourModule model.
- B. Set the Create Permissions and Delete Permissions properties on the XYZ display menu item.
- C. Add the XYZ display menu item to the Entry Points of an extension of an existing Security Privilege inthe Application Suite model.
- D. Set the Linked Permission Type property to Form, and the Linked Permission Object property to the name of the form on the XYZ display menu item.

Answer: A

Explanation:

Section: Manage the User Interface and Security for Developers (20-25%) Explanation

Explanation/Reference:

BPErrorMenuItemNotCoveredByPrivilege: Only the system administrator role can access this form
